Coupon & Voucher Validation  
Smartphone and Tablet App

## What will app-users do with this service?

Configure the way your scans will be processed.

**Record Scans**

Save barcode values after scanning.

**Validate Scans with a Database**

Check each scanned barcode against a database.

Where would you like the validation to happen?

**Online in Real-Time**

Scans validate against our servers.

**On-Device and Later Sync Online**

Your database is downloaded to the device before scanning and validated locally. Scan results are uploaded later at your discretion.

What database would you like to validate your scans against?

Enter new database name:

or [choose among existing](#).

What should be the status of duplicate scans?

**Valid**

A duplicate scan will have a valid result.

**Invalid**

A duplicate scan will have an invalid result.
