

Ticket Scanning App for Ticket Providers

Here are the top 10 reasons why 100+ ticket providers globally use the [CodeREADr](#) mobile apps for access control - exclusively or in some cases just for special events.

1. **Instant** ticket validation on-device.
2. Ticket databases and duplicate statuses **synced to all active scanning devices**.
3. **Custom validations** based on date, time, location, ticket type, etc.
4. Validate against tickets sold by **multiple ticket providers**.
5. Offline scanning with Auto Sync, Delta Sync, Hybrid Validation, and Check I/Out.
 - **Auto Sync:** DB synced to all devices in the background.
 - **Delta Sync:** Only DB changes are synced.
 - **Hybrid Validation:** Allows tickets to be sold at the gates.
 - **Check-in/out** with duration and capacity limits.
6. Ability to scan with the cameras of **iOS and Android OS smartphones** and tablets along with dedicated scanning devices, optionally in the **Kiosk Mode**. Note: This is increasingly complex to enable with the number and variety of devices available. But that's one of our specialties!
7. **Validate parking** and the issuance of free or paid items in addition to the ticket ID.
8. App branding and **white label options**. English, Spanish, and French versions. Variable content is adaptable to any language.
9. Simple integration using **webhooks and APIs**.
10. **Low cost**, starting at \$24.95 monthly.
